

Biofuels - Promises and Problems

Brighton Town Hall
Auditorium
2300 Elmwood Avenue
Monday, MARCH 24, 2008
7:00 to 9:00 p.m.

- Could biofuels production and use be sustainable in our region?
- How could our community create a sustainable energy system?
- Is it better to use biofuels than simply improve conservation of gasoline and energy use?
- Is biofuels production making food more expensive?
- Are bioenergy crops preserving or diminishing wildlife habitat and water resources?
- What's best? Ethanol? Biodiesel? Methanol? Corn? Switchgrass? Willow? Brewery waste?
- Or are there better alternative and renewable sources of energy than these?

Please join us at this **FREE** public forum to hear presentations from two experts in the field of alternative energy:

Jason Masters, President of Northern Biodiesel - www.northernbiodiesel.com
and
Jeff Gutterman, PE, Chairman, Delphi's Next Generation Fuels Forum - www.delphi.com

A participatory discussion will follow, as we work together to assess the sustainability of future energy choices and promote beneficial public policy.

Light Refreshments

Co-sponsored by the Federation of Monroe County Environmentalists www.fmce.org and
The Center for Sustainable Living www.living-sustainably.org.
